SCENARIOS

How quickly and effectively can your team react when emergencies happen? Omnilert Scenarios make it easy to carefully plan complex responses to common incidents and automatically implement them anytime, anywhere.

SCENARIO MANAGER: CRAFT CUSTOM RESPONSE SEQUENCES

Optimal emergency response management requires more than simply sending out alerts. Successfully managing throughout the full crisis continuum requires careful planning and coordination before, during and after an incident.

- Whom do you need to notify?
- How should you reach out to them?
- What messages and instructions should you send to each group of stakeholders?
- Who should help draft those messages?
- Who must approve each message?
- What immediate actions must be taken?

Preparing your initial incident responses in advance allows you to leverage all the skills, talents and expertise of your entire emergency response and leadership teams. It allows you to craft sequence of actions that are ready to deploy without the emotion and adrenaline experienced during an emergency.

Scenario Manager captures your team's response plans in a series of specific actions that can be implemented at your command. With one click, you can initiate an entire action sequence:

- Send custom text, email and voice messages to each group or department
- Notify local first responders of the situation
- Post social media messages to Twitter and Facebook
- Update your website with a targeted emergency notice

- Display a scrolling message on all employees' desktops
- Send audible alerts to fire alarms, alert beacons or public address systems
- Initiate an outbound conference call to automatically connect your emergency response team to plan next steps
