

Emergencies don't make plans, but you can.

Automatically initiate an entire series of emergency actions that you've created in advance. That's Scenarios from Omnilert.

SCENARIOS DOES ITS JOB SO YOUR TEAM CAN DO THEIRS.

Critical events require much more than an alert. Scenarios enables you to launch a full series of predefined actions and communications throughout the entire crisis management lifecycle — before, during, and after a situation.

Well in advance of the adrenaline ever hitting your team, your plan is already underway. You can create multiple unique actions for each Scenario that map directly to your emergency action and response plans.

With Scenarios, your team, a group of experts who know how to handle the urgent business at hand, is prepared.

NO WASTED TIME. NO CONFUSION. NO HASSLES.

Initiate multiple customizable messages to unique people, groups, and endpoints.

Notify and coordinate with local first responders.

Activate connected, emergency safety hardware's audible and visual prompts.

Initiate conference or web calls for Unified Command response.

Launch command dashboards.

Interact with and manage incoming responses.

Plan for every Scenario.

Initiate a complex emergency response in seconds.

Empower the precise orchestration of emergency communications and response for recognized crises, hazards, and exposures:

- Active Shooter or Intruder
- All Clear
- Bomb Threat
- Chemical Spill
- Earthquake
- Evacuation
- Executive Communication
- Fire
- General Security
- IT Outage
- Non-Violent Crime
- Traffic Routing
- Unauthorized Person
- Unscheduled Closure
- Utility Failure
- Vehicular Accident
- Weather
- Workplace Violence

AUTOMATICALLY TRIGGER A PREDEFINED SERIES OF ACTIONS WITH CONFIDENCE

You never know where you will be when an emergency strikes. Scenarios makes it easy to respond wherever you happen to be. Omnilert's web, mobile, and Apple Watch applications allow you to quickly initiate complex, predefined emergency response actions immediately. This approach allows you to codify your plans within the Omnilert system so that they can be executed quickly and flawlessly when required. Rather than needing expertise or encountering delays assessing how to respond to an incident, Scenarios allows events to be triggered by staff purely by identifying its type and occurrence.

With the enhanced ability to integrate with an increasingly connected world, you can improve critical communications and response by automatically initiating specific responses based upon alerts from independently monitored systems.

Emergencies happen. Be confident in your response efforts with Scenarios.

Master your next Scenario.
